

Student Attendance System

IDAttend is computer software program specifically designed to track and report on student attendance at schools. The system may be used in secondary as well as primary schools. IDAttend may be used to take attendance on a period by period basis or only one or two times per day.

Extensive Import and Export functions are available to help keeping school administration systems up to date. The system is primarily a client/server application utilizing Microsoft SQL Server (SQL Server 2005 Express supplied) or a Microsoft Access database for those schools not running or unable to run SQL Server. SQL Server is the recommended database platform in a multi-user environment.

Attendance may be taken in the following manner:

- ❖ Teachers in the classroom where a computer and network connection is available.
- ❖ Teachers in their office or any other networked computer later in the day.
- ❖ Administration staff/Teachers using bar-coded lists marked previously by teachers.
- ❖ Via workstations fitted with barcode/magnetic stripe scanners. Students scan their ID card. Both Administration staff and student managed option. Scan in/Scan out.
- ❖ With a stand alone version of IDAttend on a laptop and synchronised with the main database at a later stage.
- ❖ Works seamlessly with QLD MOE systems. SQL Server 2005 Express database on Member Server or your version of SQL Server.
- ❖ Student passes via barcode/mag stripe scanners/touch screen etc. Student managed option.
- ❖ All modules supplied in price. All updates provided free of charge to all supported schools.

Attendance details exported to common school Administration systems. Custom options available.

Auto Import/Export functionality on a daily basis.

The system handles Excursions, Re-assignments, late and leave passes as well as uniform and Sick Bay module. Visitors system. There are a full range of reports, including parent letter generation, SMS* and email capability, as well as System, Administration and Teacher functions based on security levels set for each user.

Direct interface with MGM (www.mgmwireless.com) and other third party text messaging providers as required.

Medications Given and Assignments Hand In.

There is also a Visitors module that can issue visitor passes.

IDAttend is fully customisable to suit your school's requirements.

Extensive Import/Export functionality including the option of automatic timed import/export.

On-line help is available for all functionality with IDAttend.

IDAttend is an Australian designed and built software system that suits Australian requirements. Updates to the software are made on a regular basis and changes to suit any one or all schools are generally catered for within a short period of time.

Student/Visitor passes are designed to use thermal receipt printers (we can supply these as well as barcode/mag stripe readers if required).
